

2012/2013

Anna – Fachhochschule Offenburg/Bachelor Verfahrenstechnik

During my internship at GMI I had the great chance to support the project “Extraction of Essential Oil from Citrus Peels”. Together with GMI’s students we built up the plant, which was a great opportunity to get some hands on experience. Due to the reason that my German lectures are more theory-oriented, I really enjoyed the fact that GMI focuses more on practical knowledge.

Moreover I joined some classes like welding, process control and calibration. The practical part of the classes was around 70 %, which is a quite different lecture experience compared to what I have experienced in Germany at the UAS Offenburg over the last years.

During my time at GMI I gained technical competence as well as social competence. Working together with students from another country, with a different cultural background and another mother language was a worthwhile challenge. I have great memories of my time in Malaysia and learned a lot about the country and the culture and of course about the diversity of Malaysian food (makan-makan).
